[McGizmo Product Overview](#)

This thread's purpose is to provide a complete overview of all regular McGizmo products. It displays current offerings as well as no longer available older lights and parts including pictures for reference.

To purchase those products ...

... visit the [McGizmo ordering sticky](#) in this forum to check what Don is currently offering directly

... browse the [Sandwich Shoppe](#) for DIY and TK offerings

... contact a member of the Aleph Builder Group to purchase an Aleph product: Darell, tylerdurden, Chop, kj and JollyRoger

... watch B/S/T

You want to know more of a certain product ... look at the FAQ sticky in this forum.

McLux-Series (original)

McLux Head (original) with McFlood reflector, NX-optic or IMS so17xa, McR-18
McLux-PR Head with 27mm PM6 reflector / McR-27
McLux-PR/T Head with same reflector

1xCR123 Tail with Kroll Clicky
2xCR123 Tail with Kroll Clicky
3xCR123 Tail with Kroll Clicky

All parts are E-series compatible.

The tails were offered in a Nickel-plated finish except some rare ones in HA-BK. The same is true for the original head whereas the PR and PR/T heads came in HA-BK and HA-NAT.

McLux-Aleph Series

- Aleph1 Head with McR-27
- Aleph2 Head with McR-20
- Aleph3 Head with McR-38
- Aleph19 Head with McR-19

All heads use the interchangeable Aleph Light Engine (LE) where the LED and driver (of your choice) is located.

- 1xCR123 Tail
- 2xCR123 Tail
- 2xCR123 Tail Flared
- 1.5xCR123 Tail
- 1xCR2 Tail Flared

Aleph 2-Stage Tailcap Iterations see pic above.
FT-versions sport the "hair-trigger" switch.

All parts are E-Series compatible.

Standard finish is "dark slate gray" HA which is almost black. There were a lot of parts offered in HA-NAT and quite a few in more exotic finishes like chrome and marble color mixes.

McLuxIII-PD

Stand-alone light (not E-Series compatible) on 1xCR123/Li-Ion with a regulated high and low mode and lots of technical improvements over the older series. Uses the McR-20 known from the Aleph Series and comes in HA-DSG (dark slate gray) or HA-NAT as well as in limited edition colors like chrome.

A limited option is the so-called **McLuxIII-T** which is a titanium version of the McLuxIII without the piston-drive and therefor twist-only activation. It uses a TY0H LED at 525/25mA and has a removable heatsink for LED-upgrades.

HD45

Another stand-alone light using the McR-45 powered by 2xCR123 or Li-Ion including the P1LA168A/18650 cells. Straight forward and rugged light with regulated high and low mode.

27LT

The third light in the McLuxIII-Series, this time with the McR-27L and a DBx2 driver. Think of it as a hybrid between the PD and the HD45 on a 2x123 chassis. Comes with a LuxIII UX1K and offers extreme toughness and technical finesse.

Other Parts

McR-XX Reflectors ... see [this thread](#) for further discussion.

Titanium Bezel Rings that fit the McLuxIII-PD, the Aleph2, the Aleph19, the Arc4 and the HDS EDC.

Titanium Bezel Rings for the Aleph1 in extremely limited number.

McClicky switch module ... a universal clicky switch module that will fit the new McTC Tailcap (see below) or any Aleph Tailcap ... or any other host you design for it. It offers momentary and constant mode and is not a reverse clicky.

MCTC Tailcap ... an E-Series compatible tailcap that accepts the McClicky switch module. In HA-BK and NAT.

E2C-Adaptor to join a C-Series head to an E-Series body in HA-BK.

Custom parts and one-of-a-kind lights are not mentioned in this thread.

bernhard

It's always darkest just before it goes pitch black.

My shoes are too tight. But it doesn't matter, because I have forgotten how to dance.
